

Post-operative Instruction Sheet

Intraocular Injection

- Use antibiotic Zymar, 1 drop to the operative eye 3 times a day for 3 days.
- Please keep your follow-up appointment as scheduled.
- You may have mild discomfort such as a foreign body sensation after the treatment. If so, take Tylenol as needed or use artificial tears.
- Call the office for increasing pain and/or loss of vision.
- It is common to have some bleeding at the injection site. This will clear over a number of days.
- It is common to have some floater(s) after the injection. This should clear with time.
